MENTAL HEALTH NEEDS OF OLDER ADULTS

OVERVIEW OF TEACHING STRATEGY

The mental health needs of older adults encompass a wide range of presentations. Frequently these get pushed aside as addenda to the other complexities of care when they need to be prioritized to better optimize care of older adults. This teaching strategy looks at the most frequent mental health issues seen in older adults and creative ways to help students better grasp and address these issues. Application of mental health concerns using evolving case studies, as well as brief scenarios can set the stage for beginning the discussion on what students saw, how they would prioritize what they saw, and what interventions might be appropriate. This teaching strategy can help educators start this process. The strategies presented can be used in lecture, seminar, and clinical settings.

LEARNING OBJECTIVES

Students will:

- Develop a better understanding of the targeted mental health needs of older adults.
- Use tools to assess mental health concerns of older adults.
- Understand the atypical presentations of mental health issues in older adults.
- Identify the impact of mental health issues in addressing the complexities in caring for older adults.
- Recognize the need to assess functioning related to mental health issues in the older adult experiencing life transitions.
- Demonstrate an understanding of the need to consider the concepts of individualized aging in prioritizing the mental health needs of older adults.

ACES ESSENTIAL NURSING ACTIONS

- Assess Function and Expectations
- Use Evolving Knowledge
- Make Situational Decisions

ACES ESSENTIAL KNOWLEDGE DOMAINS

- Individualized Aging
- Complexity of Care
- Vulnerability During Transitions
NLN EDUCATION COMPETENCIES

- Human Flourishing
- Nursing Judgment
- Spirit of Inquiry

GETTING STARTED

This teaching strategy focuses on assessing function and expectations of older adults as well as the coordination and management of care. It also enhances students’ spirit of inquiry and nursing judgment.

1. Show the PowerPoint presentation introducing students to the ACES Essential Actions as a way to organize their thinking about assessing and addressing the mental health needs of older adults.

2. Show the PowerPoint presentation on the mini case studies which address both cognitive, mood and transition issues of older adults. Guide a discussion or an online forum on what concerns, priorities, and general issues the student is considering in caring for each of the older adults in the scenarios. Each slide has speaker notes which outline the intent of the scenario, but students may have expanded ideas about how they are interpreting the scenario which may lead to a rich discussion.

3. Utilizing this teaching strategy in the classroom or seminar environment:

   Click on the link to the unfolding case study on Henry and Ertha and scroll down to play the audio file. Start playing the evolving case study of Henry and Ertha, an elderly couple experiencing issues of transition, depression (Henry) and cognitive impairment (Ertha). Click on the Instructor’s Toolkit to guide questions, but also consider the following discussion questions, which are specifically targeted for the mental health concerns of Henry and Ertha.

   - How is Ertha demonstrating that she may have a cognitive impairment?
   - How would you assess this concern?
   - What medications are generally indicated for cognitive issues?
   - What symptoms of depression do you see in Henry?
   - How are symptoms of depression differentiated from the symptoms of Henry’s medical issues?
   - What medications are generally indicated to treat depression?
   - How are these medications monitored? What are the side effects specific to older adults? How is a response measured?
4. Using this teaching strategy:

A. The activities in this teaching strategy can be used individually or in its entirety. For example, the mini scenarios can be used in lecture to illustrate a point or engage students in a discussion. They can also be used to prepare students caring for older adults, to increase their knowledge regarding what they may encounter. In addition, they can be used in an online forum discussion to have students identify their own assessments and prioritizations of the situation. The strategy can be used in its entirety in lecture, clinical or even as a clinical alternative.

In Clinical:

B. Assign students to older adults they can interview and access. Introduce students to the How to Try This series and have them access the assigned older adults using tools in the materials section that are appropriate for the clients.

C. Either in writing or in discussion in a clinical conference, have students prioritize mental health issues based on the assessment of their clients and the coordinating tool they used as part of the assessment process. Then have students identify individualized interventions to address these issues. The following are considerations for students as they formulate their thoughts on the assessments of their clients:

- Are the client’s issues related to a cognitive issue, a mood issue or anxiety?
- How is functioning affected by the client’s issue?
- How might medications play a role in the symptomatology?
- How is the client’s family affected by the issue?
- What type of a response can be expected with medication? How will the response be measured? What side effects of medication are of particular concern with older adults?
- What path and prognosis can be expected with the client’s specific issues?
- How would the nurse consider risks and benefits of treatment options in terms of quality of life with this client?

D. Have the students write a reflection of the impact they felt while both assessing their older adult clients and considering the interventions that would best fit the clients’ needs.
MATERIALS

1. Click on the two PowerPoint slides available. The PowerPoint labeled “Introduction to Mental Health Needs of Older Adults” can be used as an introduction to the topic. The power point labeled Mini Case Studies: Mental Health and Older Adults can be used to illustrate the issues discussed.

ASSESSMENT TOOLS

1. Utilize the resources on Consult Geri RN for the How To Try This series tools. The students can watch videos, print out tools, or read articles directly related to the tools used. The tools specific to mental health issues include:

   ▪ Mental Status Assessment of Older Adults: Mini-Cog
   ▪ Geriatric Depression Scale
   ▪ Confusion Assessment Method (CAM)
   ▪ Confusion Assessment Method of the intensive care unit (CAM-ICU)
   ▪ Modified Caregiver Strain Index (CSI)
   ▪ Elder Mistreatment Assessment
   ▪ Beers Criteria for potentially inappropriate medication use in the elderly part 1
   ▪ Beers Criteria for potentially inappropriate medication use in the elderly part 2
   ▪ Alcohol use screening and assessment
   ▪ Brief evaluation of executive dysfunction: an essential refinement in the assessment of cognitive impairment
   ▪ Recognition of dementia in hospitalized older adults
   ▪ Assessing and managing delirium in persons with dementia
   ▪ Decision making in older adults with dementia

2. Examples of documents as examples or to clarify concepts should be included in this section indicating a link to the PDF file of the documents.

3. Appropriate links to specific tools, such as SPICES, would be appropriate in this section. The links, however, must be specific to the teaching strategy.
